Marking the Depth

Threaded Insert

Small Straw or Toothpick

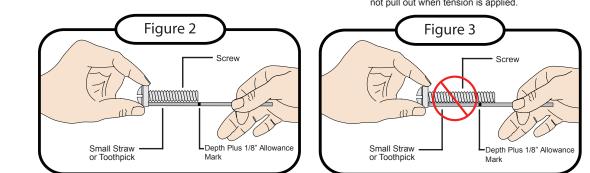

## FASTEN USING (2) M5 FLAT SCREWS TO SECURE THE BRACKET MOUNT PLATE

## **Selecting the Mounting Hardware**

- 1) Insert a small straw or toothpick into the threaded inserts found on the back of the flat-panel.
- Use a pencil to mark the depth of the threaded insert on the small straw or toothpick.
- Mark the straw or toothpick 1/8" above the depth of the threaded insert, as shown in Figure 1.
- 4) Insert the small straw or toothpick into the remaining threaded inserts to compare and verify their depth using the straw or toothpick's 1/8" allowance mark.
- 5) Locate the correct diameter screw for the threaded insert.

If the screw you selected is longer than the 1/8" allowance mark on the small straw or toothpick, as shown in Figure 2 and Figure 3, do not use this screw. The screw length must not bypass the mark.

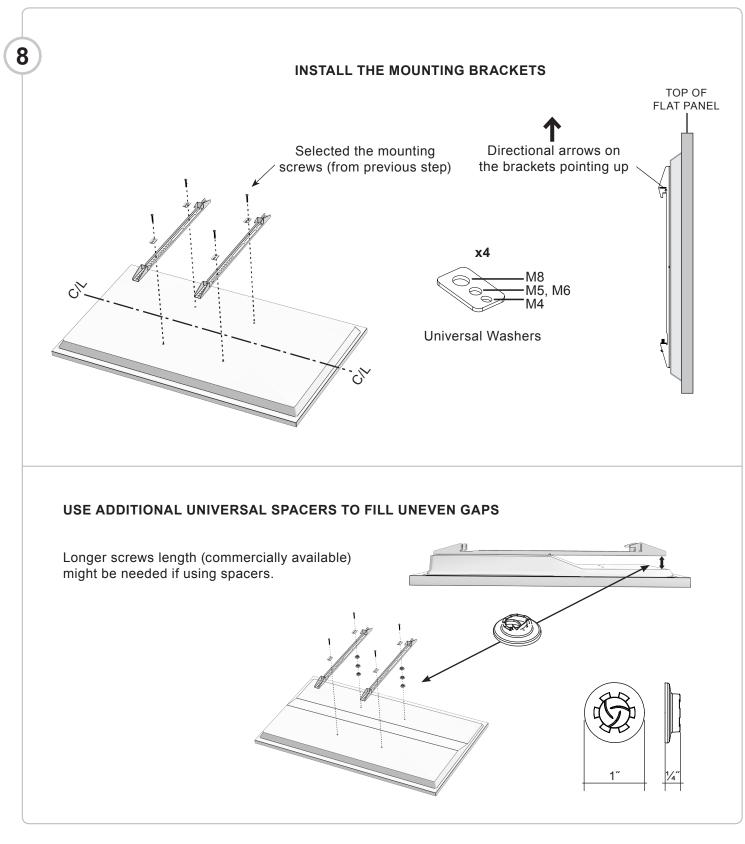

- 6) Test each size of the screws provided.
  - The correct screws should thread easily into themounting point and not pull out when tension is applied.
